NEEL ARVIND DESAI

Procurement & Supply Chain Analytics | Supplier Performance | Data Visualization

Macungie, PA | +1 (781) 824-1614 | neel8636@gmail.com | linkedin.com/in/neel-arvind-desai

PROFESSIONAL SUMMARY

Supply chain analytics professional with an engineering foundation and 6+ years of experience turning supplier, inventory, and cost data into business decisions. At Volvo Group (Mack Trucks), I analyze supplier performance and ASN/EDI compliance data, build finance-ready cost-benefit models for warehouse technology investments, and replace manual tracking with automated Power BI and Python reporting. Proficient in Excel, Power BI, Python data processing, with strengths in KPI development, root-cause analysis, Lean Six Sigma, and supplier-facing communication.

EDUCATION & CERTIFICATIONS

Northeastern University — Master of Science, Engineering Management | GPA: 3.78/4.0

University of California, Berkeley — Graduate Certificate, Entrepreneurship | GPA: 3.4/4.0

SRM Institute of Science and Technology — Bachelor of Technology, Mechanical Engineering | GPA: 3.0/4.0

Certifications: Lean Six Sigma Green Belt | Certified Scrum Product Owner (CSPO), Scrum Alliance | HarvardX Leadership

CORE SKILLS

Procurement & Supply Chain Analytics: Spend and cost-savings analysis, supplier performance metrics and KPIs, chargeback and recovery modelling, sourcing and quotation support, ASN/EDI compliance, root-cause analysis, Lean Six Sigma

Data Analysis & Visualization: Power BI (dashboards, Python visuals, report automation), advanced Excel, KPI development, data operations, automated reporting pipelines

Programming & Systems: Python (data parsing, validation, automation, OpenCV), Microsoft Power Platform (Power Automate, SharePoint)

Engineering Foundation: Packaging and mechanical design (SolidWorks, AutoCAD), FMEA/DFMEA, prototype and part-fit validation

EXPERIENCE

Logistics Packaging Engineer | ALTEN Technology / Volvo Group – Mack Trucks *Macungie, PA | Jun 2025 – Present*

- Analyze inbound supplier compliance data (packaging, labeling, ASN/EDI) to identify non-conformance trends, quantify cost impact, and drive corrective actions and chargeback recovery with suppliers.
- Built finance-ready cost-benefit models for two warehouse technology investments an AI vision supplier-compliance audit system and an autonomous drone inventory-audit program quantifying chargeback recovery, ghost-inventory recovery, and labor redirection to support capital decisions.
- Replaced manual compliance tracking with automated Power BI dashboards for supplier compliance and part-packaging data, standardizing metrics used by quality, receiving, and materials teams.
- Developed a Python validation and auto-correction engine for supplier ASNs spanning EDIFACT (DESADV), ANSI X12 856, and Volvo XML normalizing inputs, diagnosing root causes, and generating supplier-facing reports tested against a production ASN corpus.
- Built a Python/OpenCV pipeline that batch-reads packaging barcodes and cross-checks them against packaging instructions and ASN data, auto-generating supplier feedback and reducing manual audit effort.
- Lead root-cause analysis and CAPA follow-up for supplier non-conformances; partner with quality, receiving, material handling, operations, and suppliers to present findings and align packaging and data standards with plant requirements.

Program Coordinator | Northeastern University – Institute for Experiential Robotics *Boston, MA | Oct 2023 – May 2025*

- Designed and deployed a QR-based equipment tracking workflow using Microsoft automation tools, improving asset traceability and enabling utilization analysis across shared lab spaces.
- Performed cost analyses for research hardware builds, informing component sourcing and purchasing decisions.
- Led DFA-focused design reviews and coordinated hardware readiness, documentation, and operational handoffs across cross-functional research teams.

Venture Co-op, Product Development | Sherman Center for Entrepreneurship Studies *Boston, MA | Jul 2022 – Dec 2022*

- Coordinated prototype development across 5 Scrum sprints, aligning requirements, suppliers, schedules, and test feedback from design iteration through prototype evaluation.
- Translated CFD and physical test data into design decisions for temperature-controlled product concepts; presented tradeoffs and recommendations to stakeholders in structured design reviews.

Founder | IoTmatic Hub *Mumbai, India | 2019 – 2022*

- Founded a B2B IoT startup and developed “DOT,” a smart-shelf weighing-scale device capturing real-time, shelf-level inventory data; shipped the MVP and signed 8 early adopters within the first 3 months.
- Deployed with ITC across remote retail locations to continuously capture consumer and inventory data, replacing routine field-representative visits and cutting data-collection cost and turnaround time.
- Owned the venture end to end, from hardware development and iteration through enterprise sales and paid customer deployments.
